

UPCOMING LIVE WEBINARS

Medically Fragile Infants & Children: Nursing Considerations

2/24/2026 | 10 AM-12 PM

Advance your professional nursing practice by developing expertise in the recognition and management of infants and children with complex medical fragilities. This program provides an in-depth information for pediatric conditions such as severe neurologic impairments, congenital anomalies, complex cardiac disorders, and severe autism with global developmental delays. Learners will explore strategies for addressing the unique challenges these children face in their activities of daily living within school environments, while also managing intricate medical needs, technological dependencies, and functional limitations. Through evidence-based approaches and practical insights, you will gain the confidence to deliver safe, compassionate, and effective care in community and educational settings.

Target Audience: Registered Nurses, Advanced Practice Registered Nurses, Licensed Practical Nurses, School Nurse

Objectives:

- Identify the most common types of diagnoses resulting in medically fragile children.
- Describe serious complications of these diagnoses that require assessment and triage by the school nurse.
Explain common challenges in activities of daily living for each of the diagnoses discussed

Speaker: Andrea Biondi, DNP, NNP, CPNP, RN

Pediatric Health Emergencies Encountered in the Community Setting

3/17/2026 | 10 AM-12 PM

Strengthen your professional nursing practice in recognizing and managing pediatric emergencies encountered in the community setting. This program equips nurses with the knowledge and confidence to assess and respond to acute illness and injury in children across community settings including school, recreational, faith-based, and home environments. Through in-depth exploration of pediatric respiratory, cardiac, orthopedic, neurological, genitourinary, integumentary, and ocular emergencies, you'll gain practical strategies to provide timely, life-saving care.

Target Audience: Registered Nurses, Advanced Practice Registered Nurses, Licensed Practical Nurses, School Nurse

Objectives:

- Recognize injury and illness based on age/development.
- Describe a systematic approach to assessment of the ill or injured child.
Evaluate life threatening respiratory conditions and prioritize interventions for the pediatric patient.
Evaluate cardiovascular emergencies in children.
Discuss how to manage neurologic, GI, integumentary, and eye emergencies in the pediatric patient

Speaker: Andrea Biondi, DNP, NNP, CPNP, RN
