

7th ANNUAL CONFERENCE

Navigating the Journey of Pediatric Diabetes

To learn about these topics and more, mark your calendars!

FRIDAY, APRIL 12

Interprofessional focus, including providers

SATURDAY MORNING, APRIL 13

Provider-focus, but all are welcome!

**William F. Andrews Conference Center
3024 New Bern Avenue, Raleigh, NC 27610**

Keynote Address

Screening for Pre-symptomatic Type 1 Diabetes and Celiac Disease

Marian Rewers, MD, PhD

Executive Director of the Barbara Davis Center
University of Colorado

34.7% of all pediatric patients with Type 1 diabetes are either overweight or obese. In adults that number rises to 64%.

There are now 4 classes of medications used to treat Type 2 diabetes in pediatric patients.

1/3 of pediatric patients with Type 2 diabetes have evidence of complications at diagnosis.

Most individuals diagnosed with Type 1 diabetes in childhood have auto-antibodies present by 2.5 years old.

Following a very low-carb diet in Type 1 diabetes can result in DKA.
